- Water Play Panels
- Story Telling Chair
- Castles/Forts
- Growing Beds/Digging Beds
- Covered Seating
- Log Seating
- Tiered Staging
- Trim Trails
- Lean-to polycarbonate shelters

All of our range is hand built from quality materials to a very high standard ensuring that it will last and give many years of play potential for the children. Below are photos and a short description of some of the range already produced. It is possible to make bespoke items should you have a specific requirement enabling your to have something unique to your school.

PIRATE SHIP

Description:

Our Pirate ships are built with moving parts to enable children to steer the vessel and seating throughout to accommodate as many buccaneers as possible. The Pirate Ship measures 6 metres long by 1.5 metres wide 9 although this can be adapted for schools needs or space. Additional art work can be added to the base model personalising it to the school motto or ensign.

TRAINS

Description:

Trains come in large or small size with a range of carriages depending on the requirements of the school the large trains are particularly popular in blue but the colour and art work can be adapted to suit. Each large train engine measures 1.8 metres by 1.2 metres and the carriages 2.0 metres by 1.2 metres. Small trains are 1.8 metres long by .600mm wide and more suitable for younger children. Ticket offices are also available

ACTIVITY PLAY PANELS

Description:

Hand painted boards (600mm x 600mm) with areas of chalk board left for adding words, prices or times. All boards are treated with an anti ultra violet coating to preserve their vibrant colours. Shops with double sided boards and through counters are also available

MUSIC TABLE

Description:

Every time we build a music table it gets yet another feature or improvement, these are usually as a result of seeing a new way of using everyday items. With lots of banging and crashing this table encourages multi-use entry level to musical beats and sounds for all children.

CASTLES AND FORTS

Description:

This Castle is set in a soft landing area of bark or re-cycled rubber chippings , it has a walk way all way round with various places to pass or get off into the court yard .

The entrance is through a portcullis with a draw bridge and towers to the corners.

We have found this to be a much used product with boys and girls.

PLAY COTTAGE

Description:

Popular in school and pubs alike this play cottage allows for eating, sheltering and role play activity. This play cottage has an opening at one end but they can be supplied with openings both ends if needed.

SAND PLAY TABLE

Description:

This robust sand pit table is set at a child's sitting height and for those who are short on space it comes with a picnic table lid. (this also keeps out unwanted wild life.)

WATER PLAY PANELS

Description:

Imagine a clown who at the push of a button spouts a jet of water from his flower , that was the thinking with this water play wall . This particular edition is free standing with a water robot on the back , it has many jets pointing in all directions and several taps to play with.

We expect the children who use this to wear wet weather gear and try not only to send water in all directions but also to try and catch it with cups buckets and bowls.

This wall has a robot on the back. But it also can be wall mounted for one side use only.

STORY TELLING CHAIR

Description:

These Chairs are made to order from solid green oak. They come in several pieces and are installed on site. They are inspired by the famous story telling chair at the Eden project in Cornwall

COVERED SEATING

Description:

These small covered shelters have a multi-use for eating lunch, role play activity and sun shelters. They are very popular with primary schools.

GROWING/DIGGING BEDS

Description:

To encourage the idea of growing and eating fresh produce and providing the chance to sow and grow flowers which brighten any playground . Also, easy reach for all, young and old.

LOG SEATING

Description:

The idea with this seating arrangement is to provide an alternative to conventional bench seats , for teaching it allows the lesson to be contained in a tight circle. When not used for teaching ,as a play ground feature it doubles up as a stepping stone and board walk.

TIERED STAGING

Description:

This concept makes use of un-useable banks which often become muddy and short of turf. The stage on the top leads down to a lower level in steps which have planters either side as a frame. Very good for play acting and rehearsing for the school play.

TRIM TRAIL

Description:

This trim trail shows a straight run from one end to another with multi-level stepping stones. The trim trail can be adapted to branch out to several runs which join up again so the combinations are endless.

LEAN-TO POLY-CARBONATE SHELTERS

Description:

The lean-to shelter in the picture above in fact is free standing, this is because of no fixing points.

Normally we can supply and install any shape and size of shelter complete with guttering to your requirements. This improves the usability of any school outdoor area and pathways from classrooms to classrooms less congested.

The prices for this equipment can be given on application, the factors determining the cost are that all equipment is built to order using hardwearing pressure treated soft wood from a sustainable source , some of which has to be assembled and installed into the ground on site by us. (we do not do flat pack)

Also supply within a 40 mile radius of Evesham is free after this we charge a travelling surcharge.

It is our commitment to continually improve our range of products , our goal is to provide a range of well made items which are built to stand the test of wear and tear by children (probably the most hard wearing and tearing test there is)
